

# Open Source Face Shield - Remix R2

April 1, 2020

Based on original design by  
<https://open-face-ppe.now.sh/>

## Changes include:

- Visor now connects to headband using standard cable ties (3-5mm width) giving very strong connection.
- Headband extends further back and has both hooks and holes to connect to elastic.
- Headband extension means less elastic is required. Can use 2-3 hair ties looped together
- Hooks hold elastic securely but allow for quick removal for cleaning/disinfection when required.
- Height above headband reduced slightly to optimise sheet yield.
